# Assignment 1: Lumen Beauty and BakeBox

*What to do with the September streams, and with the August baskets*

Twelve Lumen sessions (the repeated S07 row is counted once). Eight products. 2,800 BakeBox orders, split between the live show and the storefront. GMV is what was sold. It is not cash left after product cost.

## Task 1.1 Two ways to rank a stream

**Copy S12. Do not copy S05.**

S05 has the best sales per viewer, 18.08 CNY, but only 379 people showed up and the stream made 6,852.76 CNY. S12 is second by a hair, 18.03 CNY per viewer, with the biggest audience of the month (1,427) and the biggest sales (25,728.68 CNY). So the best rate and the biggest room are not the same stream.

Peak viewers tells you how many people came. GMV per viewer tells you what each of them was worth in sales. S05 wins the rate only because the room was small. The giveaway night, S11, is the other warning: 9,500 comments, and the worst sales per viewer in the month, 11.88 CNY.

When you decide what a good stream is, use sales per viewer, and only trust it when the audience is large. S12 is that stream. Repeat the way S12 was run.

## Task 1.2 Month two

**Stock Cloud Cream for the week-4 pace. Give Mist Toner one fixed pitch, and a much smaller order.**

Cloud Cream is the fastest grower. It went from 15,418.24 CNY in week 1 to 30,296.71 CNY in week 4, up 96.5%, and it rose every week. At 199 CNY, week 4 is about 152 units, and that week was 42% of everything the store sold (71,616.61 CNY).

Next step: order about 150 units a week, about 600 for the month, and open every livestream with it.

Mist Toner is second. It went from 2,466.52 CNY to 4,544.28 CNY, up 84.2%, also up every week. It is still small: about 51 units in week 4, at 89 CNY.

Next step: one mention per livestream, as the cheaper step before the cream, and about 50 units a week. Watch whether the week stays near 4,544 CNY. Do not buy it as if it were Cloud Cream.

## Task 1.3 Did the streams pay for themselves?

**Yes, if you keep more than about 10% of what the streams sell. No, if your margin is thinner than that.**

The 12 sessions ran 1,380 minutes, which is 23 hours. At 800 CNY an hour for the host, the room, and samples, the bill is 18,400 CNY. The streams sold 182,907.21 CNY. That is 9.9 times the bill. The 800 CNY does not pay for the product itself, so the gap is not profit.

The answer moves with the share of GMV you keep after product cost and platform fees.

At a 30% margin you keep about 54,872 CNY, and the 18,400 bill is covered. The line is 10.06% (18,400 divided by 182,907.21). At an 8% margin you keep about 14,633 CNY, and the streams do not cover the bill.

That margin is the assumption this stands on. The hourly rate matters less. Even at 1,600 CNY an hour the bill is 36,800 CNY, and a 30% margin still covers it. An 8% margin fails at the original 800.

## Task 2.1 The strongest rules

**Sell the apron, the mixing bowl, and the spatula set as one bundle.**

On all 2,800 orders, keeping item sets that appear in at least 5% of baskets, the three strongest rules are the same three products.

Apron, then mixing bowl and spatula set: support 0.079, confidence 0.804, lift 10.091. Mixing bowl and spatula set, then apron: support 0.079, confidence 0.991, lift 10.091. Mixing bowl, then apron and spatula set: support 0.079, confidence 0.759, lift 9.622.

Use the second one. In about 221 orders, once the bowl and the spatula are in the basket, the customer buys the apron 99.1% of the time. That is about 10 times as often as chance. Put the three on one product page and in the live script. If the cart already has two, offer the third.

## Task 2.2 The bestseller that goes with nothing

**Do not build a bundle around paper doilies. Keep them only if the doily itself makes money.**

Doilies are the most common product: 784 of 2,800 orders, support 0.280. They still do not pull any other product. Lift with everything else runs from 0.804 (sugar) to 1.250 (cupcake cases), all close to 1, which means chance. No doilies rule passes the 5% line. The biggest pair is 133 orders, short of 140.

A high support only says the item is bought often. A cross-sell needs the next item to show up much more often than it usually does. Doilies do not do that. A "people who bought doilies also bought this" box would just list your normal popular products.

The keep-or-drop decision is the doily's own profit: how many you sell, the margin on each one, and what it costs to store and pack. If that is positive, keep them as a cheap extra. If they lose money, drop them, even though they are in 28% of orders.

## Task 2.3 One store, two channels

**Use one list of pairs for the live show, and a different list for the storefront page.**

Same 5% cutoff, run separately. Spatula set then apron is strong on the livestream and missing on the storefront. On 816 live orders: support 0.271, confidence 1.000, lift 3.692. Every live order with the spatula also has the apron. On 1,984 storefront orders the pair never reaches 5%, so the rule is not there.

The host is the reason. On the show, the apron is sold with the spatula every time. On the normal store page, shoppers do not pick that pair. The blended list still shows the apron kit with a lift near 10, because the live orders are mixed in. That blended list will send you to push a live-show habit onto the website.

Storefront bundle page: use pairs shoppers already buy there. Piping bag then nozzle set (support 0.109, confidence 1.000, lift 9.185) and bamboo whisk then matcha powder (support 0.100, confidence 1.000, lift 8.371). Leave the apron kit off the main slot of that page.

Live show: keep offering the spatula, the apron, and the mixing bowl together. In that room it already happens every time. You can also mention the baking pairs, but the script should follow the live orders, not the storefront page.

## AI-use appendix

I did half of this assignment myself. Grok helped me draft the findings, and the parts of the write-up I had not finished. The numbers are the ones the notebook prints.

On S09: the file shows an average watch time of 252 on a stream that lasted 150 minutes. I left that number as it was exported. I do not think it changes anything we decided. Tasks 1.1 to 1.3 use sales, viewers, stream length, and weekly product sales. They do not use watch time, so correcting S09 or leaving it alone gives the same answers.
