Assignment 1

Lumen Beauty and BakeBox

What to do with the September streams, and with the August baskets

Twelve Lumen sessions, with the repeated S07 row counted once. Eight products. 2,800 BakeBox orders, split between the live show and the storefront. GMV is what was sold. It is not cash left after product cost.

1. Two ways to rank a stream

Copy S12. Do not copy S05.

	S05	S12
GMV per viewer	18.08 CNY	18.03 CNY
People at the peak	379	1,427
Sold	6,852.76 CNY	25,728.68 CNY

Peak viewers tells you how many people came. GMV per viewer tells you what each of them was worth in sales. S05 wins the rate only because the room was small. The giveaway night, S11, is the other warning: 9,500 comments, and the worst sales per viewer in the month, 11.88 CNY.

When you decide what a good stream is, use sales per viewer, and only trust it when the audience is large. S12 is that stream. Repeat the way S12 was run.

2. Month two

Stock Cloud Cream for the week-4 pace. Give Mist Toner one pitch, and a much smaller order.

	Cloud Cream 50g	Mist Toner 150ml
Week 1 to week 4	15,418 to 30,297 CNY	2,467 to 4,544 CNY
Growth	Up 96.5%, every week	Up 84.2%, every week
Units in week 4	About 152	About 51
Share of week 4	42% of that week's sales	89 CNY, one step before the cream
What to order	**About 150 units a week**	**One pitch, about 50 units a week**

Open every livestream with Cloud Cream. About 600 units covers four weeks at the week-4 pace. For Mist Toner, watch whether the week stays near 4,544 CNY. Do not buy it as if it were Cloud Cream.

3. Did the streams pay for themselves?

Yes, if you keep more than about 10% of what the streams sell. No, if the margin is thinner.

Streaming bill	What the streams sold	Break-even margin
18,400 CNY	**182,907 CNY**	**10.06%**

The 12 sessions ran 23 hours. The rate is 800 CNY an hour for the host, the room, and samples. Sales were 9.9 times that bill. The 800 CNY does not pay for the product, so the gap is not profit.

If the margin is	You keep	Against 18,400	Covered?
30% of stream GMV	54,872 CNY	Covers the bill	Yes
8% of stream GMV	14,633 CNY	Short of the bill	No

The margin is the assumption this stands on. The hourly rate matters less. Even at 1,600 CNY an hour the bill is 36,800 CNY, and a 30% margin still covers it. An 8% margin fails at the original 800.

4. The strongest rules

Sell the apron, the mixing bowl, and the spatula set as one bundle.

On all 2,800 orders, keeping sets that appear in at least 5% of baskets, the three strongest rules are the same three products. The bold row is the one to act on.

Rule	Support	Confidence	Lift
apron -> bowl + spatula	0.079	0.804	10.091
bowl + spatula -> apron	**0.079**	**0.991**	**10.091**
bowl -> apron + spatula	0.079	0.759	9.622

In about 221 orders, once the bowl and the spatula are in the basket, the customer buys the apron 99.1% of the time. That is about 10 times chance. Put the three on one product page and in the live script. If the cart already has two, offer the third.

5. The bestseller that goes with nothing

Do not build a bundle around paper doilies. Keep them only if the doily itself makes money.

Share of orders	Lift with other items	Rules at the 5% line
28%	**0.80 to 1.25**	**None**

Doilies are in 784 of 2,800 orders. Lift near 1 means chance: sugar is 0.804, cupcake cases are 1.250. The biggest pair is 133 orders, short of the 140 needed to count. A box that says people who bought doilies also bought this would just list your normal popular products.

Keep or drop them on their own profit: units sold, the margin on each one, and the cost to store and pack. If that is positive, keep them as a cheap extra. If they lose money, drop them, even though they are in 28% of orders.

6. One store, two channels

Use one list of pairs for the live show, and a different list for the storefront page.

Live show, 816 orders
spatula -> apron
Support 0.271
Confidence 1.000
Lift 3.692
The host already sells this set.

Storefront, 1,984 orders
piping bag -> nozzle set
Support 0.109, lift 9.185
whisk -> matcha powder
Support 0.100, lift 8.371
The apron pair is absent here.

On the show, the apron is sold with the spatula every time. On the normal store page, shoppers do not pick that pair. The blended list still shows the apron kit with a lift near 10, because the live orders are mixed in. That list would push a live-show habit onto the website. Leave the apron kit off the main slot of the bundle page. On the live show, keep offering the spatula, the apron, and the mixing bowl together, and let the script follow the live orders.

AI-use appendix

I did half of this assignment myself. Grok helped me draft the findings, and the parts of the write-up I had not finished. The numbers are the ones the notebook prints.

On S09: the file shows an average watch time of 252 on a stream that lasted 150 minutes. I left that number as it was exported. I do not think it changes anything we decided. Tasks 1.1 to 1.3 use sales, viewers, stream length, and weekly product sales. They do not use watch time, so correcting S09 or leaving it alone gives the same answers.
